

LED-Tennis Score Board

ALGE-TIMING Tennis Score Boards are used with big success at all tournament levels from the local club tournament up to GP-tournaments or Davis Cup. The score board is controlled by a terminal with "intelligent tennis software". You key in who made the point and the rest will do the controller. If you have the score of 6 to 6, the terminal will ask you if you want to continue with a tiebreak or if you want an open end set.

LED Tennis Score Boards have some advantages compared to electro mechanic display boards. First of all they operate totally silent, this means you will not hear any sound of a moving digit. It is also possible to adjust the brightness in 9 levels. This will help to see the board in bright sunshine as well in a dark indoor facility or at night.

ALGE-TIMING can offer many different Tennis Score Board models. We will be also happy to help you with custom designed tennis score board solution.
